SoftCard III (CP/M): Microsoft BASIC Reference Manual Errata

=====

In Appendix D: Disk Errors, page 174 reads:

67	Too many files	An attempt is made to create a new file (using SAVE or OPEN) when all 255 directory entries are full.
----	----------------	---

It should read:

67	Too many files	An attempt is made to create a new file (using SAVE or OPEN) when all directory entries are full. The CP/M limitation for a diskette is 48 files; the hard disk limitation is 512.
----	----------------	--

However, if you use files larger than 16K you will have two directory entries for the file. If the file happens to be over 32K there will be three entries. This 16K is a file boundary for CP/M, irregardless of block size.
