ProDOS 1.1.1: Incorrectly Displays 1982 as the Current Year

=====

This article last reviewed: 19 January 1988

ProDOS 1.1.1 has problem with dates after 1987. One result is that when you set the date in AppleWorks, then you turn off the computer and back on again, the displayed date is correct except the year is shown as 1982 rather than 1988.

If you upgrade the ProDOS on your startup disks to ProDOS 1.4, this problem should disappear.
